RE PROPOSED DEVELOPMENT at 51 Crossacres Street, Doolandella QLD 4077

Lot 34 on RP90234

Dear Sir/Madam

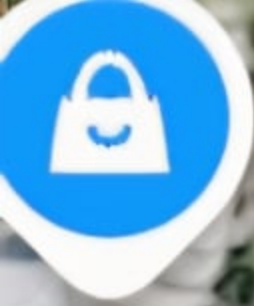

I write to you regarding the reconfiguration of Lot 34 on RP90234 at 51 Crossacres Street, Doolandella QLD 4077 from 1 into 23 lots. I am concerned that the proposed subdivision here will further encroach into already diminished wildlife corridors in this area. This block presently affords local wildlife such as local native birds, reptiles, insects and marsupials valuable habitat where they can forage for food, shelter from predators and heat and nest to reproduce. Parts of this section of land in question are densely vegetated with native trees and provides valuable habitat for the wildlife.

At the northern end of this block (the cul de sac end) there is a considerable area that is designated as a biodiversity zone by Brisbane City Council. This area has been designated as such for good reason and should remain untouched by urban development such as is proposed. Please tell me how an area marked by Council as a biodiversity zone can have this proposed development considered?

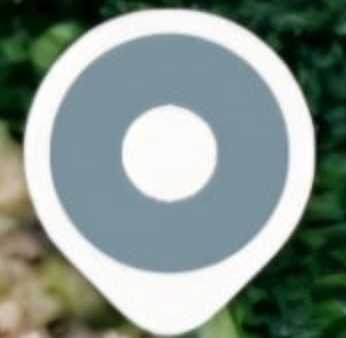

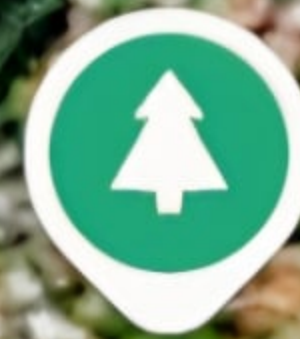

Apart from the biodiversity zoned area providing crucial habitat to wildlife, it also provides a corridor from one area to another for this wildlife to move for the purpose of feeding and breeding. This contributes to the long term health and viability of the wildlife populations. This block of land forms part of a remaining corridor between it and the larger Reserve along Blunder Creek to the east, as well as a smaller strip of habitat to the west along the waterway on Wallaroo Way.

I have included 2 photos below illustrating how this block of land with a biodiversity zone designation provides part of the small remaining link between other larger areas of vegetation and wildlife corridors in this area of Doolandella. I sincerely hope that Brisbane City Council will take this information onboard and address concerns of further degradation of the wildlife spaces and corridors in this area when considering this further development here in Crossacres Street. Queensland already has a long history of destroying wildlife habitats and corridors which in turn leads to adverse effects on our native wildlife and vegetation. I will await your reply,

Yours faithfully
